

## Waist-Line Control™

### Combat Stubborn Belly Fat

Item #01902 • 120 vegetarian capsules

New research has discovered a way to target unwanted abdominal fat. A specialized peptide complex derived from naturally-fermented *Saccharomyces cerevisiae* can reduce calorie intake and lessen the accumulation of abdominal fat.<sup>1</sup> And you can find these dual-action peptides in our new **Waist-Line Control™** formula!

Peptides from *S. cerevisiae* are thought to modulate appetite-regulating hormones in the brain by affecting *neuropeptide Y* (NPY)<sup>1</sup> and can reduce the activity of enzymes responsible for creating fat from excess energy in foods ... particularly *glucose-6-phosphate dehydrogenase* (G6PD) and *malic enzyme* (ME).<sup>2,3</sup>

This one-two punch may reduce food intake and support the reduction of abdominal fat, as well as inhibit inflammatory factors.<sup>4</sup> In a recent, placebo-controlled human trial, both male and female participants taking **500 mg** of *S. cerevisiae*-derived peptides before breakfast and dinner reduced their daily calorie intake by **25.3%** and lost nearly **two full inches** of waist circumference — about two belt sizes!<sup>1</sup>

Waist-Line Control™ is stimulant-free, without side effects, and contains the identical peptide complex and dosage used in the above study! So fight unwanted abdominal fat, and discover a healthier, happier you ... with our new Waist-Line Control™ formula!

**Effective weight loss requires reduced caloric intake and increased exercise. Individual results may vary. Consult your physician or health care professional if you are nursing, pregnant, or trying to become pregnant.**

**This supplement should be taken in conjunction with a healthy diet and regular exercise program. Results may vary.**
